Formulas and Dax Measures used in Tasks 1 to 6

<u>Task 1</u>

Custom Column

Word Count: = List.Count(Text.Split([Tweet Text]," "))

Tweet Day Number=DayNumber = Date.Day([Tweet Date])

Odd Day: OddDay = if Number.Mod([DayNumber],2)=1 then "Yes" else "No"

Tweet Time: Hour = Time.Hour([Tweet Time])

Filters were applied on the visual as per the task requirement

DAX Measure:

Engagement Above 5%: High Engagement =

IF('Socialmedia'[Engagement Rate] > 5,"Above 5%","Below 5%")

Chart Visibility: 6 to 11 pm

Show Chart = VAR CurrentHour = HOUR(NOW())

RETURN

IF(CurrentHour >=18 && CurrentHour <=23,1,0)

KPIS: were made by using simple SUM formula of Total Tweets, Media Views, Media Engagement, and average formula was used to calculate the average engagement rate.

Total Media Views: Total Engagements = SUM('Tweets'[Media Engagements])

Average Engagement Rate=Avg Engagement Rate = AVERAGE('Tweets'[Engagement Rate])

High Engagement Tweets:

High Engagement Tweets =CALCULATE(

COUNT('Tweets'[Tweet ID]),

'Tweets'[Engagement Rate] > 5)

<u>Task 2</u>

Because the same dataset is used most columns were already made so they were used the additional ones are mentioned below:

Even Day Column: EvenDay = if Number.Mod([DayNumber],2)=0 then "Yes" else "No"

Tweet category Column:

Dax Measures

Tweet Category =SWITCH(

TRUE(),

'SocialMedia'[Hashtag Clicks] > 0, "Tweets with Hashtags",

'SocialMedia'[URL Clicks] > 0, "Tweets with Links",

'SocialMedia'[Media Engagements] > 0, "Tweets with Media",

"Other")

Dax Measure:

Show Chart =VAR HourNow = HOUR(NOW())

RETURN

IF(HourNow >= 15 && HourNow <= 17,1,0)

Kpis were again made by using the simple summation formula as mentioned above for Total URL clicks

User profile clicks, Total Hashtags and Total Tweets

Dax for Total Interactions:

Total Interactions =

SUM('Tweets'[URL Clicks]) +

SUM('Tweets'[User Profile Clicks]) +

SUM('Tweets'[Hashtag Clicks])

<u>Task 3</u>

Custom Columns

Weekend Check: Weekend =

if Date.DayOfWeek([Tweet Date],1) >=5 then "Weekend" else "Weekday"

Dax

Even Impressions =

IF(MOD('Tweets'[Impressions],2)=0,"Yes","No")

Total Engagement=

'Tweets'[Retweets] + 'Tweets'[Likes]

Time Control Measure=

Show Chart =

VAR HourNow = HOUR(NOW())

RETURN

IF(HourNow >= 15 && HourNow <= 17,1,0)

Filters were applied on the visual as per instructions

<u>Task 4</u>

Custom Column remove the tweet word with letter c

Text.Combine(List.Select(Text.Split([Tweet], " "), each not Text.Contains(Text.Lower(_), "c")   ),

" ")

Creating Even Engagement Column DAX

Even Engagement =

IF(MOD('SocialMedia[engagements],2)=0,"Yes","No")

Media Category Column DAX

Media Type =

IF (‘SocialMedia'[Media Engagements] > 0,"With Media","Without Media")

Month Column DAX

Month = FORMAT('SocialMedia'[Date],"MMM")

Time Control Measure:

Show Chart =

VAR HourNow = HOUR(NOW())

RETURN

IF((HourNow >= 15 && HourNow <= 17) ||

(HourNow >= 7 && HourNow <= 11),1,0)

<u>Task 5</u>

Custom Column remove the tweet word with letter c

Text.Combine(List.Select(Text.Split([Tweet], " "), each not Text.Contains(Text.Lower(_), "s")   ),

" ")

Dax-Median Media Engagement =

MEDIAN('SocialMedia’[Media Engagements])

Even Media Views =

IF(MOD('Tweets'[Media Views],2)=0,"Yes","No")

Time Control Measure

Show Chart =

VAR HourNow = HOUR(NOW())

RETURN

IF((HourNow >= 15 && HourNow <= 17) ||

(HourNow >= 7 && HourNow <= 11),1,0)

Calculations of Y-axis Dax Measures

Total Replies = SUM('SocialMedia'[Replies])

Total Retweets = SUM('SocialMedia'[Retweets])

Total Likes = SUM('SocialMedia'[Likes])

Filters given in instructions are applied on the visuals

<u>Task 6</u>

Remove Tweets Containing Letter "D"

Custom Column remove the tweet word with letter d

Text.Combine(List.Select(Text.Split([Tweet], " "), each not Text.Contains(Text.Lower(_), "d")   ),

" ")

DAX App Open Type =

IF('TSocialMedia'[App Opens] > 0,"With App Opens","Without App Opens")

Time control Measure for Chart Visibilty:

Show Chart =

VAR HourNow = HOUR(NOW())

RETURNIF(

(HourNow >= 12 && HourNow <= 18) ||

(HourNow >= 7 && HourNow <= 11),1,0)

Kpi

Total App Opens =SUM('SocialMedia'[App Opens])
